Hello Mr. Tarr,

Please urge Governor Cooper to insist that the Department of Environmental Quality hold at least 3 public hearings on the information supplied recently by the Atlantic Coast Pipeline LLC. This is no time to rush into approving the water quality permit that Duke Energy needs to go forward.

I feel strongly that the pipeline would have a grave impact on the water in the areas which it will impact; it will not benefit the state economically or the quality of life of those residents along the pipeline.

Instead we should convince Duke Energy to put its resources into alternative energy, into developing solar panel fields, into harnessing the power of the wind and water. We need research and development especially of the wind and wave and other water resources we have all around us here in our beautiful state! Climate Change is upon us, the storms are worsening, our cities along the coast or in low-lying areas are threatened, and we are heading toward disaster, which our children and grandchildren will reap. It is almost too late to turn this tide, but we must put our energy in this new direction, literally!

Thank you for reading this, and please do all you can.

Yours truly,  
Lorna Chafe  
Chapel Hill, NC
